Convenient, Easy-to-Use Image Analysis **With the New IA44**

St. Joseph, MI—The IA44 Image Analysis System is ideal for transforming raw images into data that is easily interpreted. The versatility of having an on-board PAX-it™ interface gives you easy access to all the benefits of today's best image management system. Images are located, sorted, and organized according to their descriptive fields, and reports are easily generated and ready for sharing. Ideal for a number of applications—including determination of grain size, particle size, coating thickness, nodularity (cast iron), dendrite arm spacing, porosity, area of fractions, and ductile & gray iron analysis. The IA44 pairs perfectly with the Olympus® GX-Series inverted metallograph (also available from LECO) to meet your diverse inspection and research needs.
