

Re: European Union's Restriction of Hazardous Substances (RoHS)

LECO Corporation is committed to environmental protection and is compliant with the European Union's 2011/65/EU Directive relating to the **Restriction of Hazardous Substances (RoHS)**.

For the past several years, multiple measures have been taken at LECO to help ensure compliance with the Directive. LECO has required members of its supply chain to certify that all products being delivered are RoHS compliant. Various internal processes (e.g., circuit board assembly, plating, etc.) have been converted to use RoHS compliant substances.

LECO has converted many existing instruments to be RoHS compliant. The reliability and performance of our instruments has not been compromised during the conversion process as they are subject to strict qualification and testing. New instruments are being developed with RoHS in the forefront of the design criteria. Instruments that are RoHS compliant are noted on the Declaration of Conformity statement, as well as on our website.

Please feel free to contact raghu_murthy@lecotc.com if you have any questions regarding LECO's RoHS program.

A handwritten signature in blue ink that reads "Raghu Murthy". The signature is fluid and cursive, with the first name being more prominent.

Raghu Murthy
Director of Compliance
